---

Jarrold,

Thanks for getting back to me - and after I emailed, I saw their June 2 press release. They seem to be sampling throughout the distribution system, but I'm curious what concentrations are found in the municipal wells (PS1/4 and #9) throughout this process. Their press release is not clear on that point. They indicated 'one isolated sample in the industrial area' was still high at 1245 ppt after flushing.

Are there plans by the Air Force to resample these wells?

Kim,

Yes, AH is continuing to flush their system. Last week a few of their samples came back with detections still above the Health Advisory. They were planning to flush through the weekend and sample again yesterday (Mon). They are hoping to have results back tomorrow (Wed) and will decide then if they need to continue flushing. Unfortunately I don't have any details about how they are conducting the flushing. In the meantime, bottled water continues to be provided to residents.

Thanks,

Jarrold,

Thanks for providing the map. I forgot to ask yesterday - do you have an update on the status of the Airway Heights wells PS 1/4 and #9? I understand they were flushing these wells but as of last week still had some hits above the HA. I'm curious what they are doing to flush these wells and if they are having any success.

Thanks again,

Kim
